Edwina – SDR is the file extension for Smartdraw, drawing software that can create flowcharts among other things. The file is a decision flowchart was created very early in the induced seismicity study using Smartdraw software licenses that the GW/UIC section had. The licenses expired when we switched from windows XP to windows 7 and will cost about \$100 a license to reactivate them for windows 7.

Does anyone know what program I can use to open the file with the extension .sdr ?  
I tried all programs in the drop down with no luck. I called IT and they don't know.  
Would any of you have the source doc?  
Thanks for your help.  
Edwina

WG – spelled out in each appendix

Use of disposal zone versus injection interval – Of course we had injection interval (a Class I well term) in the decision model so I changed it to disposal zone and updated the figure and text in the report

Global check:  
open-hole  
shut-in  
bottomhole  
et al.
